

Model GT1175 Standard Slide Doors Installation Manual
with U30 Control
P/N C-00105 Rev 8-18-20

Nabco Entrances Inc. S82 W18717 Gemini Drive Muskego, Wisconsin 53150
Phone: (877) 622-2694 Fax: (888) 679-3319 www.nabcoentrances.com
NABCO hours of Operation: Monday to Friday 8:00 a.m.- 4:30 p.m. (Central Time)

Associated Manuals Part Numbers: U30 Microprocessor Control Setup and Programming Manual P/N C-00203 Model
GT1175 Electrical Installation Manual **with U30 Microprocessor Control** P/N C-00198
Automatic Sliding Door Owners Manual (P/N C-00109) for Decal Installation
NABCO Price Book P/N 16-9244-30 (for Sensors, Switches, and Accessories)

WARNING

- Turn OFF all power to the Automatic Door if a Safety System is not working.
- Instruct the Owner to keep all power turned OFF until corrective action can be achieved by a NABCO trained technician. Failure to follow these practices may result in serious consequences.
- NEVER leave a Door operating without all Safety detection systems operational.

CHAPTER 1: WARNING LABELS

Warning labels are universal and used to alert an individual of potential harm to one's self or to others. The following warning labels are listed in a hierarchy order that defines the most potential danger first, and the least potential danger last. Please refer to this page in the event that a warning label is displayed within this manual and further definition needs to be explained.

DANGER

Indicates potentially dangerous situations. Danger is used when there is a hazardous situation where there is a *high* probability of severe injury or death. It should not be considered for property damage unless personal injury risk is present.

WARNING

Indicates a hazardous situation which has *some* probability of severe injury. It should not be considered for property damage unless personal injury risk is present.

CAUTION

Indicates a hazardous situation which *may result in a minor injury*. Caution should not be used when there is a possibility of serious injury. Caution should not be considered for property damage accidents unless a personal injury risk is present.

Attention: A situation where material could be damaged or the function impaired.

Notice: Indicates a statement of company policy as the message relates to the personal safety or protection of property. Notice should not be used when there is a hazardous situation or personal risk.

Note: Indicates important information that provides further instruction.

CHAPTER 2: GENERAL SAFETY RECOMMENDATIONS

WARNING

Do not install, operate or service this product unless you have read and understand the General Safety Recommendations, Warning Labels, contained in this manual. Failure to do so may result in bodily injury, or property damage.

WARNING

Read, study and understand the installation and operating instructions contained in, or referenced in this manual before operating. If you do not understand the instruction, ask a qualified technician. Failure to do so may result in bodily injury, or property damage and will nullify all warranties.

WARNING

For Indoor use only.

WARNING

Use this operator only with Nabco sliding doors.

DANGER

Do not place finger or uninsulated tools inside the electrical controller. Touching wires or other parts inside the enclosure may cause electrical shock, serious injury or death.

CAUTION

The Ground wire from the U30 Control 120 VAC Harness, and the Incoming 120 VAC Ground wire must be connected to the Ground screw located within the Swing door Header.

CAUTION

If the door appears broken or does not seem to work correctly, it should be immediately removed from service until repairs can be carried out or a qualified service technician is contacted for corrective action.

Notice: This manual, the owner's manual and all other associated manuals must be given to and retained by the purchasing facility or end user.

Notice: Wiring must meet all local, state, federal or other governing agency codes.

Notice: All electrical troubleshooting or service must be performed by qualified electrical technicians and must comply with all applicable governing agency codes.

CHAPTER 3: SCOPE

SECTION 3.1: To the Installer

The purpose of this manual is to familiarize the installer and purchaser with the proper installation and operation of this system. It is essential that this equipment be properly installed and operational before the door is used by the public. It is the installer's responsibility to inspect the operation of the entrance system to be sure it complies with any applicable standards. In the United States, ANSI Standard 156.10 covers the GT-1175 Slide Door System and ANSI Standard Z97.1 covers Glass Installation. Other local standards or codes may apply. Use them in addition to the ANSI standard. The GT-1175 is listed with the Underwriters Laboratory and is identified as such on the label.

Instruct the building owners and operator on the essentials of the operation of the door and this device. The owner should follow these instructions to determine whether the door is operating properly and should immediately call for service if there is any malfunction. All installation changes and adjustments must be made by qualified, NABCO trained technicians.

SECTION 3.2: Objective

The GT-1175 Standard Slide Door system is designed to be installed within a Rough Opening of a Building. The door function is controlled by the U30 Microprocessor Control. This control offers many features to accommodate most installation options. This manual offers step by step instructions.

CAUTION

A pedestrian Door that does not have its glass sections installed at the Factory shall specify that the glazing material employed is to comply with the requirement in UL 325 par.30.5.1:

"The glazing material in both fixed and sliding panels of all sliding doors and in all unframed swinging doors shall comply with the requirements in the Performance Specifications and Methods of Test for Safety Glazing Material Used in Buildings, ANSI Z97.1. Glazing material for other pedestrian doors shall also comply with ANSI Z97.1, except that single strength or heavier glass may be used for those portions of doors involving a glazed area of less than 1ft² (0.9 m²) and having no dimension greater than 18 in (457 mm)".

SECTION 3.3: Video Links

Associated Video	Phone	QR Code

Note: Commericals may play before video is displayed.		

CHAPTER 4: GETTING STARTED

SECTION 4.1: Types of Units

- ▶ Mechanical Configurations:
 - Single Slide: (1) Slide Door that slides to the right or left with (1) Sidelite Panel.
 - Bi-Part: (2) Slide Doors that slide apart from the center with (2) Sidelite Panels.
- ▶ Emergency Egress:
 - Full Open: Both the Slide door and Swing Sidelite break out for emergency egress.
 - Fixed Sidelite: Secured to the Header and Jamb Tube. Only the Slide door breaks out for emergency egress.

4	U30 Microprocessor Control	V-00020	9	Anti Rise Roller	A-00163
5	DS 150 Operator	M-00395	10	Hanger Roller	A-00162

SECTION 4.4: Remove the Header Cover

1. Remove (2) 8-32x0.625L Flat head screws. Remove Header Cover by lifting it up and then pulling it out.
2. Unplug the Sensor (if equipped). Remove Parts boxes and/or Parts bags from inside Header.

CHAPTER 5: INSPECT THE ROUGH OPENING

1. Ensure the Rough Opening is correct size.
 - The width of the Rough Opening should equal: **PACKAGE WIDTH + 1/4 INCH ON EACH SIDE**
 - The height of the Rough Opening should equal: **PACKAGE HEIGHT + 1/4 INCH**
2. Ensure the floor is level across the entire opening. If used, check recessed threshold across the door opening.

CHAPTER 6: ASSEMBLE DOOR FRAME (NO TRANSOM)

1. Position Jamb Tubes on either side of Header according to the instruction sticker located on each Jamb Tube, showing

proper location and orientation. Ensure the removable cover side of Header is facing up.

2. Orientate the Frame in relation to the building:

- ▶ Fixed Sidelite: Removable Cover side of Header must face the Exterior side of building.
- ▶ Full Open: Removable Cover side of Header must face the Interior side of building.

3. Secure the Header to each Jamb Tube with (6) 1/4-20 x .75 Whizlock screws.

- a. If installed correctly there will be a 1/8 inch gap between the bottom of Jamb Tubes and the flat surface.

CHAPTER 7: ASSEMBLE DOOR FRAME WITH TRANSOM

- ▶ Transom Horizontal: Secured between the Header and Rough Opening, plus (2) Jamb Tubes.
- ▶ Transom Vertical: Secured between the top of Header and bottom of the Transom Horizontal. Transom Verticals are used to divide glass or panels.
- ▶ Transom Clip used to secure Transom Verticals to top of Header.
- ▶ Glass Stops: Assembly of (2) Brackets with Vinyl Strips. Used to secure glass.

SECTION 7.1: Secure Transom Verticals to Header

1. Place the Header on a flat surface. Align the Transom clips to the pre-drilled holes on top.
2. Secure Transom Clips to Header with 10 x 1-3/4 inch Phillips Pan Head screws.
 - a. Please refer to the orientation sticker located on the Header for proper location and orientation.

3. Obtain Transom Verticals.
4. Secure (1) Transom Vertical to each Transom Clip with 1/4-20 x 1" Flat Head screws.
5. Secure the Transom Horizontal onto the Transom Verticals with #8 x 1 inch Pan Head screw.

SECTION 7.2: Install the Glass Stops

Attention: Examples shown within the Glass Stop sections are of the GT1175 Standard Slide Door.

Note: Each Glass Stop is precut at the NABCO Factory according to placement and height of the Transom Vertical.

Note: Glass Panels can be installed before or after the Door Frame is secured to the rough opening.

7.2.1 Top of Header

1. Go to the top of Header. Snap-In the Base Glass Stops between each Transom Vertical.
 - a. Ensure the tall back of Base Glass Stops face the Exterior side of building.

7.2.2 Transoms and Jamb Tubes

1. Go underneath the Transom Horizontal. Snap-In Base Glass Stops between the Transom Verticals.
 - a. Ensure the tall back of Base Glass Stops face the Exterior side of building.
2. Go to the Transom Vertical. Snap-In Base Glass Stops between the Transom Horizontal and Base Glass Stops located on top of the Header.
 - a. Transom Verticals should be installed just above the Base Glass Stop installed on the Header.

7.2.3 (1/4 inch) Glass Panel, Flush Glazing

1. Measure between the Bottom of the Transom Horizontal and the Top of the Base Glass Stop located on the Header. Cut strips of Vinyl to that length.
2. Measure the full width of each Base Glass Stop located on the Transom Horizontal. Cut strips of Vinyl to that length.

**Figure 14** Measure to Cut Flush Glaze Vinyl

3. On the same side as the Glass Stop, roll or press Vinyl Strips into each Transom Pocket.
 - a. Using a Roller, or keeping the vinyl wet with plain or soapy water, can make vinyl installation easier.
4. The other side of Vinyl Strips are installed after the Glass Panel has been put in place. Please see "SECTION 17.1: Complete the Transom Installation".

**Figure 15** Install Base Glass Stops and Vinyl on Same Side

SECTION 7.3: Secure Header and Transom to Pocketed Jamb Tubes

Note: 1175 Slide Door Units installed with a Transom are shipped with Pocket Jamb Tubes only.

**Figure 16** Secure Header to Jamb Tubes

1. Place the Header between the Pocket Jamb Tubes so the removable cover side is facing up. Ensure the Frame is still orientated in relation to the building.
2. Secure the Header to each Jamb Tube with (6) 1/4-20 x .75 Whizlock screws. If installed correctly there will be a 1/8 inch gap between the bottom of Jamb Tubes and the flat surface.

SECTION 7.4: Assemble Door Frame

1. Position Jamb Tubes on either side of Header according to the instruction sticker located on each Jamb Tube, showing proper location and orientation. Ensure the removable cover side of Header is facing up.
2. Orientate the Frame in relation to the building:
 - ▶ Fixed Sidelite: Removable Cover side of Header must face the Exterior side of building.
 - ▶ Full Open: Removable Cover side of Header must face the Interior side of building.

SECTION 7.5: Install the Tie Rods

Note: Tie Rods are provided for Transom Units as required by NABCO Engineering.

1. Lift to position the assembled Frame into the rough opening.
2. Shim and Plumb Jamb Tubes in both planes to ensure the rough opening allows a 1/4 inch clearance.
3. Shim and plumb the Transom Horizontal at the top to ensure the rough opening allows a 1/4 inch clearance.

4. Go to the side of Header that is closest to the Exterior side of Door Opening,
5. Mark the exact location of each Transom Vertical by drawing a horizontal line (the full width of the Transom Vertical); along the outside edge of the Transom Horizontal; onto the ceiling of the Rough Opening.
 - a. Do not draw the line wider than the Transom Vertical. It is recommended to use a level for this step.
6. From the center of each Horizontal line, measure 1 inch deep (towards the interior side of building). Mark a Vertical line onto the ceiling of the Rough Opening. It is recommended to use a level for this step.

7. Carefully remove the Door Frame from the Rough Opening. Set aside.
8. At the end of each Vertical Line mark, drill (1) 3/8-16 Concrete Anchor hole into the ceiling of the Rough Opening.
9. Obtain all Tie Rods. (1) Tie Rod Parts box is shipped for each Transom Vertical.
10. Snap the Back Plate out from each Transom Vertical for easy access to the Tie Rod.

11. Transom Verticals are pocketed with (2) channels. Determine which channel is closest to the Exterior side of Door Opening.
12. Insert (1) Tie Rod into that channel.

13. Go to the top of Header. Insert each Tie Rod down into the 1 inch, pre-drilled hole.
14. Once the Tie Rod is through the Header, loosely attach (1) Backing Plate, (1) 3/8 inch Washer, (1) 3/8 inch Lock Washer and (1) 3/8-16 Hex Nut (in that order) to the bottom of the Tie Rod.
 - a. The length of each Tie Rod equals the distance between the top of the Header, and the top of the Transom Horizontal, plus 2-5/8 inches.

15. Allow each Tie Rod to rest on the Roller Track "Leg" within the Header.
 - a. The Tie Rod must remain inside the Transom Vertical until the Frame is fully secured into the Rough Opening.
 - b. Tie Rod Installation is completed after the Frame is installed.

CHAPTER 8: SECURE DOOR FRAME TO BUILDING

1. Lift to position the assembled Frame into the rough opening.
 - a. To prevent electrical interference for the 120 Vac Line, always route 120 Vac Power through the Header Endcap that is opposite to the controller and motor/operator.
 - b. Please refer to "Model GT 1175 Electrical Installation Manual"; P/N C-00198 for detailed information.
2. Shim and Plumb Jamb Tubes in both planes to ensure the rough opening allows a 1/4 inch clearance. Shim and plumb the Header or the Transom Horizontal at the top to ensure the rough opening allows a 1/4 inch clearance.

Figure 23 Shim and Plumb Frame

SECTION 8.1: Anchor Placements

- ▶ Anchors are not provided by NABCO. Anchors must be appropriate for the type of structure being fastened to.
- ▶ Screw in anchors to secure the Frame (per manufacturer's specifications).

Figure 24 Anchor Placement

Note: It is recommended to countersink holes as required to flush the surface.

Note: It is recommended to drill tap threads for 1/4 inch anchors in a steel or aluminum structure.

Note: Do not overtighten anchors to prevent deforming Jamb Tubes.

8.1.1 Jamb Tubes

Use 1/4 inch diameter anchors with a minimum of 3 per Jamb Tube, maximum is 48 inches on center. Drill 1/4 inch diameter holes in the face of Jamb and then countersink each hole.

Figure 25 Screw Anchors

8.1.2 Transom Horizontal

- ▶ Use 1/4 inch diameter anchors with a minimum of 3 per Transom tube, maximum is 48 inches on center. Anchoring is required within 8 inches of all vertical mullions.
- ▶ Drill 1/4 inch diameter holes in the face of Transom Horizontal and then countersink each hole.

8.1.3 Header

To prevent Header sag, use 1/4 inch diameter anchors or 3/8 inch threaded rods, with a maximum 48 inches on center. First anchor maximum is 36 inches from each end of the Header. Drill 1/4 inch diameter holes inside the top of Header.

SECTION 8.2: Complete the Tie Rod Installation (For Transom Units only)

- After the Frame has been installed, slide each Tie Rod up the Channel into each 3/8-16 Anchor located in the ceiling.
 - The 3/8-16 Anchor is used to securely fasten the Frame.
- Go to the bottom of each Tie Rod. Tighten the 3/8-16 Hex Nut and 3/8 inch Lock Washer to secure the Backing Plate.
- Snap the Back Plate back into each Transom Vertical.
 - It may be necessary to use a rubber mallet to slightly tap the Back Plate into place.
 - Protect the surface of the Back Plate before hitting it with a rubber mallet.

CHAPTER 9: WIRE THE SWITCH ASSEMBLY (ROCKER SWITCH OR KEY SWITCH)

Figure 26 Wire the Switch Assembly

- Go inside the Header. Locate the Pin wiring that is attached to the U30 Microprocessor Control, Main Harness.
- Draw Pin wiring through a hole located at the side of Header and Jamb Tube. Continue to route wiring down the Jamb Tube.
- Pull the Pin Wiring out, through the cut out.
- Obtain (1) loose 5 Circuit Pin Housing from the Parts Box. Insert each Pin into the 5 Circuit Pin Housing accordingly:
 - 1 = Red, 2 = Orange/White, 3 = Blue, 4 = Green, 5 = Orange
- Obtain (1) Switch Assembly and (2) 10-32 x 1/2 inch Phillips Head Screws from the Parts Box.
- Connect the Switch Harness from the back of the Switch Assembly to the Main Harness. Place extra wiring back inside the Jamb Tube.
- Insert the Switch Assembly into the Cut Out.
- Secure the Switch Assembly to the Jamb Tube with (2) 10-32 x 1/2 inch Phillips Head Screws.

CHAPTER 10: INSTALL THE THRESHOLD

Note: Thresholds are factory cut to be the same width as the door opening. However, extending the Threshold across the entire door opening is optional. To order additional track, please contact customer service at (877) 622-2694.

Figure 27 Recessed vs Surface Track

Standard Thresholds vary in width and can be installed two different ways:

- ▶ Recessed: Installed into the floor (1/2 inch deep) across the full length of the track.
- ▶ Surface: Installed on the surface of the floor with ramps attached to both sides.

SECTION 10.1: Install the Surface Threshold

Attention: Do Not center Threshold to Header. Doing so will cause misalignment.

Attention: The Threshold must be laid down so the Channels are located on the same side of Slide Door.

FOR JAMB-TO-JAMB TUBE APPLICATIONS, SKIP TO STEP (3)

1. Locate (2) screw splines on the exposed side(s) of the Threshold.
2. Secure (1) Threshold End Cap to the screw spline(s) with (2) 6 x 3/8 inch Phillips Head screws.
 - a. If the Threshold End Cap can not be properly secured with the screws provided, use a 1/8 inch diameter drill bit to make the screw spline bigger.

3. On the same side of Door Frame where the Sidelite will be installed, snap a chalk line on the floor from Jamb to Jamb.

4. Lay down the Threshold so the Bumper Channels are on same side of Slide Doors.
5. Ensure the Threshold is centered to Jamb Tubes, and full length is flush with the chalk line.

6. Go to the Header on the Sidelite Side of Door Frame.
7. Plumb the Floor Track by hanging the Plumb Bob from the Header (Sidelite Side). There should be a 1/8 inch overhang.
8. Do not permanently install the Surface Threshold until the Slide Doors are completely installed.

**Figure 31** Plumb Line**SECTION 10.2: Install the Recessed Threshold****Attention:** Unit must be designed for Recessed Threshold.**Figure 32** Track Recess

1. On both the Exterior and the Interior side of Door Frame, snap a chalk line on the floor from Jamb to Jamb.

**Figure 33** Snap Chalk Line

2. Create a channel that is the full width of Jamb Tubes, and 1/2 inch deep.
3. Lay down the Threshold so the Bumper Channels are on same side of Slide Doors.
4. Center the Threshold inside the channel so the full length is flush with the chalk line.
5. Ensure the channel is plumb, square, and 1/2 inch deep throughout. Failure to do so may cause the Slide door to malfunction.
6. Go to each end of Threshold. Mark (1) drill hole approximately 4" from each edge. Continue to mark remaining drill holes to be evenly spaced.

**Figure 34** Mark and Drill Holes on Threshold

7. With a 1/4 inch masonry drill bit, drill through the Threshold and into the floor no less than 1-1/2 inch deep.
8. Do not permanently install the Surface Threshold until the Slide Doors are completely installed.

CHAPTER 11: INSTALL THE FULL OPEN SIDELITE

SECTION 11.1: Install the Bottom Pivot

1. Go to the bottom of the Pivot Jamb Tube. Insert the Bottom Pivot into the hole.
2. Secure the Bottom Pivot to the Pivot Jamb Tube with (1) 1/4-20 x 1/2 inch Phillips Head screw.
3. Go to the screw hole located in front of the Barrel. Secure the Floor Pivot to the Threshold with (1) 1/4-20 x 1/2 inch Phillips Head Screw.
4. Insert (1) 1/4 x 2-3/4 inch Phillips Head Screw inside the Barrel. Tighten.
5. Cap the Barrel with (1) Bushing.

SECTION 11.2: Partially Install the Limit Arm

1. Slide (1) .255 ID x .900 OD x .125 THK Nylon Washer onto (1) 1/4-20 x 1 inch Phillips Head Screw.
2. Go underneath the Limit Arm. Insert the Washer and Screw up into the screw hole.
3. Go to the pre-drilled screw hole located at the bottom of Header (on the Pivot Side of Sidelite).
4. Secure the Limit Arm to the Header by tightening the Screw.
 - a. Loosely tighten (just enough to keep the Screw assembly from falling out of the hole).
 - b. Limit Arm installation is completed after the Swing Sidelite is fully installed.

SECTION 11.3: Install the Full Open Sidelite onto the Upper Pivot and Bottom Pivot

1. Locate the Bottom Pivot inside the Pivot Stile (at the bottom). Insert the Bottom Pivot into the Floor Pivot Barrel.

2. Go to the Top Pivot that is preinstalled inside the Pivot Stile. Push the Top Pivot down by pressing on the Spring Pin.
3. Align the Top Pivot with the Pivot Hole located at the bottom of Header.
4. Release the Spring Pin to allow the Top Pivot to snap up into the hole. Ensure the Top Pivot fully engages the hole.
 - a. If necessary, use a flathead screwdriver to lift up on the Spring pin until the Pivot Pin is fully seated within the hole.
 - b. Ensure not to pinch Cable Wiring.

SECTION 11.4: Complete Installation of the Limit Arm

1. Swing open the Swing Sidelite 90 degrees. Align and then rest the Limit Arm inside the Top Rail.
2. Open the Swing Sidelite all the way. Tighten (1) 1/4-20 x 1 inch Phillips Head screw to secure the Limit Arm to the Header.

SECTION 11.5: Adjust the Ball Detents

Note: Breakout resistance for Ball Detents must meet ANSI Standard A156.10 or Local Codes.

1. Go to the top of the Strike Stile. With a 15/16" Open End wrench, loosen the Nut to raise or lower the Ball Detent so it has light contact with the Bottom of Header.
2. Open and close the Swing Door several times to score the surface on the Bottom of Header locate and mark where the Score intersects the center groove.
3. With a 1/4 inch drill bit, drill a screw hole through the Bottom of Header. Countersink the screw hole 3/8 inch x 82°.

4. Go to the bottom of the Strike Stile. With a 15/16" Open End wrench, loosen the Nut to raise or lower the Ball Detent so it has light contact with the Threshold.
5. Open and close the Swing Door several times to score the surface on the Threshold. Locate and mark where the Score intersects the center groove.
6. With a 1/4 inch diameter drill bit, drill a hole through the Threshold (Just deep enough for the Ball Dentent to fit within). Countersink the screw hole to be 1/4 inch x 82°.

7. Close and then break open the Swing door to test fit for both Ball Detents.
 - a. To adjust the fit, increase the size of the hole and countersink.
 - b. Do Not over-drill the hole. If hole is overdrilled the Threshold will need to be replaced.
 - c. For additional travel remove the Ball Detent Bracket to lower or raise the Ball Detent.

CHAPTER 12: INSTALL THE FIXED SIDELITE

SECTION 12.1: Secure the Fixed Sidelite to the Door Frame

1. Locate (2) Cut Outs on the side of the Pivot Stile. Align and then slide the Fixed Sidelite until (2) Mounting Brackets (preinstalled on the Pivot Jamb Tube) can be seated inside each Cut Out.
2. Slide the Fixed Sidelite towards the Interior of the Building until both Mounting Brackets butt up against the inside wall of the Pivot Stile.

3. Locate (1) cut out at the top of Strike Stile. Align and then slide the Fixed Sidelite until (1) mounting bracket (preinstalled under the Bottom Lip of Header) can be seated inside the Cut Out.

4. Snap a chalk line between Jamb Tubes in front of Sidelite Panel. If the Sidelite Panel is flush to the chalk line, it is square.
5. Secure the Fixed Sidelite Panel to all (3) Mounting Brackets with 1/4-20 x 1/2 inch Flat Head Screws.

SECTION 12.2: Install the Bottom Guide Assembly

1. Go to the bottom of Strike Stile. Remove the Bottom Guide Cover Plate.

2. Install the Bottom Guide Double Roller Assembly by sliding (2) rollers into the Bottom Rail so the Bracket sticks out from underneath (in direction of where the Slide door is to be installed).
3. Use the Bracket to slide the Bottom Guide Double Roller Assembly towards the Pivot Stile.
4. Replace the Cover Plate.

SECTION 12.3: Install the Floor Bracket

1. Snap a chalk line between Jamb Tubes in front of Sidelite Panel.

2. Go to the bottom of the Strike Stile. Insert the Floor Bracket inside the Bottom Rail so the bottom plate portion sticks out from underneath (in direction of where the Slide door is to be installed).
3. Close the Slide Door. Adjust the Fixed Panel for weathering gap. Adjust the Slide Door for rocking.
4. Secure the upper plate portion of the Floor Bracket to the side of Strike Stile with (1) 1/4-20 x 1/2 inch Phillips Head screw.
5. Use the Floor Bracket as a template to drill (2) screw holes for #14 x 1-1/4 inch Flathead Tapcon screws.
6. Secure the Floor Bracket to the floor with (2) #14 x 1-1/4 inch Flathead Tapcon screws. Replace the Cover Plate.

CHAPTER 13: INSTALL THE SLIDE DOOR

SECTION 13.1: Secure Slide Door to Belt Clips

CAUTION

Do not test Breakout until all adjustments are made and doors are secured.

1. Cover the Sidelite Panel with cardboard on the side that will face the Slide door.

CAUTION

Do not rotate the Roller Axle counter-clockwise. Doing so will unthread the Axle from the Roller Assembly.

2. Go to the Carrier on top of Slide Door. Loosen (1) 7/16-20 Whiz Lock Nut on each Roller by inserting (1) 7/32" Allen wrench into the exposed end of a Roller Axle. Hold the 7/32 inch Allen wrench in place to keep the Roller Axle stationary. At the same time, loosen (1) 7/16-20 Whiz Lock nut with a 15/16 inch Open End Wrench.

3. To make it easier for rollers to "catch onto the track", slightly tilt and lift the Slide Door into the Header, and onto the Track.

4. Secure each Belt Clip to the Carrier with (2) 1/4-20 x 3/4 inch Whiz-Lock screws.

SECTION 13.2: Install Bottom Guides

13.2.1 Insert Bottom Guide into the Threshold (Full Open Sidelite)

1. Locate the Bottom Guide Assembly that was preinstalled inside the Slide Door Strike Stile.
2. Lift up the Prongs until the Bottom Guide is directly above the Guide Channels. Drop the Prongs into the Guide Channels.

13.2.2 Secure the Bottom Guide Double Roller Assembly to the Slide Door (Fixed Sidelite)

1. Go to the Bottom Rail on the Fixed Sidelite. Locate the Bracket that should be sticking out from underneath.
2. Slide the Pivot Stile (on Slide Door) onto the Bracket.
3. Support the weight of the Fixed Sidelite. Breakout the Slide door to Full Open position.
4. Secure the Bracket to the Pivot Stile with (2) 1/4 - 20 x 3/4 inch Whiz-Lock screws.

SECTION 13.3: Adjust Rollers

13.3.1 Hanger Rollers

1. Raise or lower the Slide door by turning the Axle clockwise with a $15/16$ " Open End Wrench.
 - a. The appropriate gap between the Bottom Rail and floor is between $11/16$ inch to $15/16$ inch; with the nominal gap being $7/8$ inch.
2. Ensure the Leading Edge of the Slide door and Header are parallel.

Figure 57 Door Adjustment

13.3.2 Anti Rise Rollers

1. Loosen (2) Anti-Rise Rollers located towards the middle of the Carrier.
2. Slide the Anti-Rise Roller up or down within the slot until there is $1/64$ inch to $1/32$ inch gap between the Roller Wheel and the Top Track. The Gap should be about the same thickness as a credit card.

Figure 58 Wheel and Track Clearance

13.3.3 Tighten Rollers

1. Hold the $7/32$ inch Allen wrench in place to keep the Roller Axle stationary. At the same time, tighten each (1) $7/16$ -20 Whiz Lock nut with a $15/16$ inch Open End Wrench.

Figure 59 Tighten Rollers

SECTION 13.4: Adjust the Interlocks

Attention: Pocketed Slide Door Units do not use Interlocks.

1. Manually close the Slide Door. Ensure the Interlocks are properly engaged. If not, adjust the Interlocks.

Figure 60 Close Door to Adjust Interlocks

Note: Adjust Interlocks so there is no contact between the Rail and the Interlock. Any contact will cause the Slide Door to bind.

2. Obtain (1) parts bag containing (4) Shims that was taped to the Slide Door at the NABCO factory.
3. Remove the Interlock on the Sidelite, Strike Stile. Place (1+) shims directly underneath the Interlock. Line up the screw holes.
4. Secure the Interlock assembly to the Sidelite Strike Stile with (2) #10-32 x 5/8 inch Phillips Head Screws. Loosely tighten the mounting screws just enough to keep the Interlock assembly from falling out of place.

5. Go to the Interlock located on the Pivot Stile of the Slide Door. Loosen the mounting screws.
6. Manually close the Slide Door. The loosened Interlocks will automatically adjust to proper position.
7. Tighten (2) #10-32 x 5/8 inch Phillips Head Screws to secure each Interlock to each Stile.

CHAPTER 14: PERMANENTLY INSTALL THE THRESHOLD

1. Go to each end of Threshold. Mark (1) drill hole approximately 4" from each edge.
2. Mark remaining drill holes to be evenly spaced.

3. With a 1/4 inch masonry drill bit, drill through the Threshold and into the floor no less than 1-1/2 inch deep.
4. Secure the Threshold with Fasteners not provided by NABCO.

SECTION 14.1: Threshold Maintenance

1. Check for wear of Bottom Guide Roller and Bumpers inserted within Threshold Channels. Listen for squeaking/grinding noise.
2. Look for dirt/debris/excessive build-up. If dirt/debris/excessive build-up is found.
 1. Vacuum to remove loose material.
 2. Wipe off the Threshold.
 3. Use (1) slotted Screw Driver to remove dirt/debris and/or excessive build-up located within Threshold Channels.
3. Inspect weekly and daily during winter as snow and ice can build up.

CHAPTER 15: 110 VAC GENERAL WIRING

DANGER

Read and understand the “U30 Controller Setup and Programming Manual” P/N 15-9000; and the “Electrical Installation Manual U30 Control” P/N 15-10596-30 before attempting to powerup the GT1175 Slide Door. Failure to do so may result in damage to the Slide door and/or injury to the installer and will nullify all warranties.

DANGER

Disconnect power to the junction box prior to making any electrical connections. Failure to do so may result in serious personal or fatal injury. When uncertain whether power supply is disconnected, always verify using a voltmeter.

Notice: Wiring must meet all local, state, federal or other governing agency codes.

Attention: Electrical circuit to Nabco operator must not be shared with other equipment such as lighting, cash registers, or any device that might cause electrical interference on the circuit.

1. Ensure all power is disconnected at the Junction box and the 1175 Slide Door.
2. Determine correct supply voltage is 115 VAC $\pm$ 10%.
3. Insert all incoming 120VAC power wires into the access hole located on Jamb Tube. It is recommended to house all wires into an Electrical Conduit.

CAUTION

Keep all incoming 120 VAC wiring separate from low voltage wiring within Header. Do not route 120 VAC wires near the U30 Microprocessor Controller and Motor/Operator.

4. Go to the TB1 Port located on the Left side of the Power Supply Module.
5. Insert the Incoming 120 VAC Black (HOT) wire into the Circuit marked “L”.
6. Insert the Incoming 120 VAC White (Neutral) wire into the Circuit marked “N”.
7. Insert Green (Grounding) wire into the Circuit marked “PE”.
8. Ensure the Slide door system is Grounded for safe and consistent operation.

CHAPTER 16: INSTALL WEATHERING

SECTION 16.1: Door Panels

16.1.1 Fixed Sidelite Units

1. Secure the Brush Holder to the Bottom Rail of Slide door with (3) #6 x 1/2 inch self tap screws.

16.1.2 Full Open Units

1. Secure the Brush Holder to the Bottom Rail of Sidelite Panel with (3) #6 x 1/2 inch self tap screws.
 - a. It is recommended to leave at least a 1/8 inch gap between the Edge of the Pivot Stile and the Brush Holder, while allowing 1/8 inch Vinyl to extend past the Brush Holder so the gap is filled.
2. Breakout the Swing Panel.
3. Secure the Brush Holder against the Bottom Rail of Slide door with (3) #6 x 1/2 inch self tapping screws.

SECTION 16.2: Door Frame

1. Ensure the entire Door Frame is properly secured to the Rough Opening.
2. Apply caulking bead between the Door Frame and Rough Opening (inside and outside).
3. Apply caulking bead to the Threshold at the bottom of Door Frame.

CHAPTER 17: GLAZING

CAUTION

Use caution when moving and installing the glass panels. These panels are constructed with tempered glass. Any sharp objects that come in contact with the glass may cause the glass to craze. NABCO Entrances, Inc. is not responsible for broken glass.

Attention: Per Chapter 24 of the International Building Code (IBC), all glass must comply with ANSI Standard Z97.1 (Glass and Settings Blocks are not provided by NABCO).

Note: Cross-Blocking helps direct glass weight away from the strike edge of the door, to prevent sagging and possibly dragging on the floor or threshold.

SECTION 17.1: Door Panel

Note: Place Setting Blocks in the designated marked spots, only.

1. Ensure the Base Glass Stop (Preinstalled at the NABCO Factory) is free of debris and/or sharp objects.
2. Go to the STRIKE side of panel at the TOP.
 1. Measure (6) inches across from the Strike End of Top Rail, towards the Pivot Stile. Mark that spot.
 2. Measure (6) inches down from the Strike End of Top Rail towards the Bottom Rail. Mark that spot.
3. Go to the PIVOT side of panel at the BOTTOM.
 1. Measure (6) inches across from the Pivot End of Bottom Rail, towards the Strike Stile. Mark that spot.
 2. Measure (6) inches up from the Pivot End of Bottom Rail, towards the Top Rail. Mark that spot.

4. For each marked spot, place (1) Setting Block (not provided by NABCO) on top of the Base Glass Stops.
5. Place the Glass Panel on top of the Setting Blocks and up against the Vinyl.
6. Shift the Glass Panel until it is square. Secure the Glass Panel with Snap-In Glass Stops.
7. To raise the Door Panel for Door Panels that are not square or sag at the lead edge, increase the thickness of a Setting Block (not provided by NABCO).

SECTION 17.2: Complete the Transom Installation

1. Place (1) Setting Block (not provided by NABCO) on top of the Base Glass Stops.
2. Place the Glass Panel on top of the Setting Blocks; against the Vinyl. Shift the Glass Panel until it is square.
3. Secure the Glass Panel with Snap-In Glass Stops (Provided by Nabco).

SECTION 17.3: Complete the 1/4" Glass Stop Flush Glazing

1. Place the Glass Panel so it butts up against the Vinyl.
2. Carefully move the Glass Panel UP into the pocket of the Transom Horizontal.

3. Shift the Glass Panel in and out of the pockets until it is square.
 - a. Pockets within the Transoms are deep enough to allow the Glass Panel to be shifted for proper alignment.
4. Place Setting Blocks onto the Base Glass Stops near Jamb Tubes for proper weight distribution.
5. Secure the Glass Panel with Snap-In Glass Stops.
6. Roll or press the remaining Vinyl within the Transom Horizontal and Transom Verticals.
 - a. Using a Roller, or keeping the vinyl wet with plain or soapy water, can make vinyl installation easier.

Figure 67 Complete the Glass Panel Installation

SECTION 17.4: Dust Protector Hoods (Clean Room Optional)

Figure 68 Install Dust Protector Hoods for Door Panels and Transoms

SECTION 17.5: Aluminum Hood

Note: All Aluminum Hoods and Vinyl Shields are installed for Clean Room Slide Door Units only and are not manufactured by NABCO. Please call Customer Service for replacement parts at 1-888-679-3319.

Note: Aluminum Hoods are installed at the bottom of each Door panel and Transom.

1. Install the Glass Stops. Place each Aluminum Hood over each Glass Stop so the bottom edge of the Aluminum Hood is resting on the surface.
 - a. Do Not remove protective paper from double sided Cladding Tape at this time.
2. Insert the bottom half of each Vinyl Strip inside the gap that is located behind the Aluminum Hood. The Vinyl Flap must be laying on top the Aluminum Hood.
3. Hold the assembly in place while it is pressed up against the Glass Panel. Make a temporary Mark along the full length of the Vinyl Strip. Ensure the bottom edge of the Aluminum Hood is still resting on the surface for proper alignment.
4. Remove the assembly and the protective paper to expose the Cladding Tape from the Vinyl Shield.

5. Align the Vinyl Strip to the temporary Mark and adhere to the Glass Panel.
6. Remove the protective paper to expose the Cladding Tape from the Aluminum Hood.
 1. Align the Aluminum Hood with the Vinyl Shield.
 2. Adhere the Aluminum Hood to the Glass Stop and tuck it under the Vinyl Flap.

SECTION 17.6: Stainless Steel Hood (Header)

1. Install the Glass Stops. Go to the (Removable Cover) side of Header.
2. Position the Stainless Steel Hood on top of the Header so the (turned under) bottom lip is resting on the Header surface and the inside face is pressed up against the building. Ensure proper length and fit is correct.
3. Remove all protective paper to expose the Cladding tape. Adhere the Stainless Steel Hood to the Header.

Figure 69 Install Dust Protector Hoods for Header

CHAPTER 18: ADJUSTMENTS

SECTION 18.1: Balance Weight of Door Panel with Nose Caster

The installation of Nose Casters depend upon the weight and size of the door panel. Please call customer service for details.

1. Go to the Bottom Rail. Remove (1) End Cap.
2. Break Open the Slide door. Locate the Nose Caster that was pre-installed within the Strike Stile.

Figure 70 Adjust the Nose Caster

3. Loosen the #8-32 Set Screw. Position the Wheel so it is perpendicular to the Bottom Rail. Retighten the #8-32 Set Screw.
4. Fully close the Slide door. Ensure the Nose Caster does not hit or scrape the floor. Reinstall the End Cap.

SECTION 18.2: Adjust the Breakout Magnet

Figure 71 Breakout Magnet Location

1. The Magnet is secured to the Limit Arm Bracket that can slide to the Left and Right. Slide the Breakout Magnet to the Left or to the Right until it is aligned with the Magnetic Reed Switch.
 - a. The Magnetic Reed Switch is a 3/8 inch diameter black circle located on the Bottom Lip of Header.

SECTION 18.3: Adjust Preload

Attention: Glass must be installed before adjusting Preload.

1. Breakout the Slide door approximately 5 degrees (just enough to expose the Preload Adjustment Screw located on back edge of door). Check for door sag. The Slide door should latch without having to be manually lifted.

2. Support the weight of Slide Door.
3. Go to the Preload Block located inside Top Rail. Loosen (2) 1/4-20x1.75 Locking Bolts.
4. Go to the back edge of Pivot Stile. Reduce Door sag by tightening the 5/16 inch Set Screw with an 5/32 inch Allen Wrench.
 - a. In the event a longer Set Screw is necessary, an optional 1/2 inch Set Screw is supplied by NABCO within the Parts Bag.

SECTION 18.4: Adjust Horizontal Position of Carrier

Attention: Adjust Preload before adjusting position of Carrier.

1. Break Out the Slide door.
2. Go underneath the Carrier. With a 3/16" Allen Wrench, loosen (2) 3/8-16x1.5" Screws.
3. Slide the Carrier to the Right or Left until both end caps are aligned to both Stiles.
4. Tighten Set Screws.
5. Verify that the Lower Panic Catch inside the Door Web is still aligned to the Upper Panic Catch inside the Carrier. If an adjustment is necessary:
 1. Go to the Lower Panic Catch. Loosen (2) 1/4-20 X 1-1/4 inch Socket Screws used to to secure the Lower Panic Catch to the Door Web.
 2. Slide the Lower Panic Catch to the right or to the left until it is aligned to the Upper Panic Catch. Tighten Socket Screws.

Figure 75 Align the Lower Panic Catch to the Upper Panic Catch

SECTION 18.5: Adjust the Ball Plunger

1. Breakout the Slide door. Go inside the Top Rail (closest to the Strike Stile). Remove the Panic Catch Assembly.

Figure 76 Panic Adjustment

2. Loosen the Set screw that is located in front of the Panic Catch.
3. Go underneath the Panic Catch. Raise or lower the Ball Plunger to adjust the engagement.
 - a. The Ball Plunger must be adjusted for proper breakout resistance to meet ANSI A156.10 code and/or local code.
 - b. Use minimal engagement if Panic Hardware is used.
4. Tighten the Set screw. Secure the Panic Catch Assembly inside the Top Rail with (2) 1/4-20 x 1-1/4 inch Socket Head screws.

SERVICE PARTS: FIXED SIDELITE; HANDED KIT

Left Hand P/N M-01256; Right Hand P/N M-01253
