| Date<br>3/01/2024                                                                                                              | Bulletin #<br>123 | Model<br>GT1175- All Optex Safety Beams Kits (V-00073) |
| Subject<br><b><i>Safety Beam Heads &amp; Extensions will be shipped <span style="color: red;">INSIDE THE HEADER</span></i></b> |                   |                                                        |

## Issues and Concerns:

- Due to Beam Heads (Eyes) being DAMAGED and creating delays in Installations, Nabco Entrances has changed the way these Assemblies Ship.

## Solution:

- Effective Immediately, all Beam Heads (Eyes), along with the Blue and Gray Extension Harnesses (Nabco Kit# V-00073) will be kitted and secured inside the Header of all GT1175 products, thereby minimizing damage and missing items :

- The Optex Control Box (A-00709) will remain in the same location inside the Header. The wiring to the Control Box from the Opus, and to the Beam Ends, will not change:

- The Jamb Tubes and Active Stiles of all GT1175 Units will still be prepped with the holes required to mount the Beam Eyes in the proper location. However, these Extrusions and Door Panels will NOT have the Beam Ends or wiring inside of them as before:
